

SPEADS F-1000

SPEADS RS07A

DSR/CSR

Speads RM07 F1000

Speads RS07 D/CSR

Racing Concepts is proud to present the newest generation of Speads race cars, the RM07 and RS07.

Both cars are designed and built in South Africa for SCCA club racing competition. Each is based on an immensely strong tubular steel chassis, and can accept a wide variety of motorcycle engines for various classes and rule sets. As well, each features high-quality GRP bodywork designed by noted aerodynamicist Paul Haas. Both cars are suspended by inboard pushrods front and rear.

Both cars feature the latest in safety measures, including impact attenuation structures at the front, large side-impact protection beams, and anti-intrusion bars on all control arms.

Contact us today to find out more about the latest iteration of these exciting cars!
